Part No. GC-1000  
Grow Cage

## Plant Support System by Clever Gardener

The revolutionary Grow Cage is the smartest way to contain almost any plant that needs restraint or support. Designed to be assembled in stages, as your plants grow, it grows with them. 5 rings & 15 legs included.

### Plant Grow Cage:

Grows with your plant by adding one section at a time. Taller than most wire cages. Over 50" assembled.

### Strong Dark Black UV-resistant material:

Color blends with plants, will never rust, easy to clean and will last for years.

### Easy to assemble into various shapes and heights:

Designed to support and protect a variety of plants. Rings interlock to form trellis system.

### Space saver storage:

Easily disassembled into small compact sections ready for use next season.

### Designed with wide flat support surfaces, no sharp edges:

Not like wire cages that break branches when fruit is on the vine.

### Can be used as plant cover supports during cold weather:

Cover delicate plants without crushing when covered with plastic bags or drop cloths.

### Just a few potential uses:

Tomatoes	Hydrangea
Ivy, all varieties	Pole Beans
Flowering vines	Squash
Most Berries	Peony Bushes
Climbing Roses	Cucumbers
Clematis	Shrub and Tree supports
Grape Vines	Camellia

Assembly Instructions

### Steps:

- 1** Your plant tomato cage is designed to be assembled one ring section at a time. Insert three legs in a ring as shown.
- 2** Make certain leg is inserted until the stop is flush with the bottom surface of the ring.
- 3** Assemble legs into another ring and insert all three legs into first ring assembly. This procedure should be repeated until desired height is reached.
- 4** It should be noted that the legs from the first ring assembly should be pressed into the ground at least 6 inches to secure the cage.

## Trellis Support System

### Interlocking ring feature can form trellis:

Following step one above for first ring assembly. Assemble a second ring with only two legs attached. The third ring socket should then be mounted over the projecting leg as shown.

Continue to join the rings to form the desired pattern of the base. Then stack rings to the desired height. Unlimited combinations are possible.
